## Paired bootstrap test of $\lambda$ values

	Treatment A	Treatment B	Difference	Sorting
Bootstrap	$\{1, 2, \dots, n\}$	$\{1, 2, \dots, m\}$		
1	$\{5, 7, \dots, k\} \rightarrow \lambda_{A,1}$	$\{4, 7, \dots, g\} \rightarrow \lambda_{B,1}$	$\Delta_1$	
2	$\{2, 9, \dots, 13\} \rightarrow \lambda_{A,2}$	$\{2, 1, \dots, 11\} \rightarrow \lambda_{B,2}$	$\Delta_2$	
3	$\{9, 6, \dots, d\} \rightarrow \lambda_{A,3}$	$\{1, 3, \dots, b\} \rightarrow \lambda_{B,3}$	$\Delta_3$	
	.....	.....		
99,999	$\{b, 8, \dots, b\} \rightarrow \lambda_{A,99999}$	$\{j, b, \dots, b\} \rightarrow \lambda_{B,99999}$	$\Delta_{99,999}$	
100,000	$\{b, 7, \dots, b\} \rightarrow \lambda_{A,100000}$	$\{k, 3, \dots, k\} \rightarrow \lambda_{B,100000}$	$\Delta_{100,000}$

## Paired bootstrap test

In TWOSEX-MSChart, you can use “C. Paired BT” to run “paired bootstrap test”. The results are presented in three ways: The t-confidence interval, the percentile confidence interval and the probability of significant differences among all bootstrap samples.

Copyright 1997-2024 Hsin Chi

4

## Attention!

You should **NOT** use routine statistical functions in SAS, SPSS, or Excel to analyze the data files created by “A3. Bootstrap”. You can, however, use programs designed specifically for bootstraps to carry out advanced analysis of these data files.

Copyright 1997-2024 Hsin Chi

5

## Files for the paired bootstrap test

There are 100~250 files generated from your life table data. Many of them are ready for paired bootstrap test. You can identify them with the “**Effect boot**” in the file name. If your data file is Ex.txt, there will be following bootstrap result files:

Ex\_Effect Boot-A1a-R0.txt  
 Ex\_Effect Boot-A2a-r.txt  
 Ex\_Effect Boot-A3a-lambda.txt  
 Ex\_Effect Boot-A4-T.txt  
 Ex\_Effect Boot-B4\_TPOP.txt  
 Ex\_Effect Boot-W2\_Oviposition days.txt  
 Ex\_Effect Boot-W8\_Nf to N ratio.txt  
 Ex\_Effect Effect Boot-X1\_PreAdult duration.txt

# How to use paired bootstrap test

3/21/2024

**Important!**  
Use the third line of life table data file for treatment code

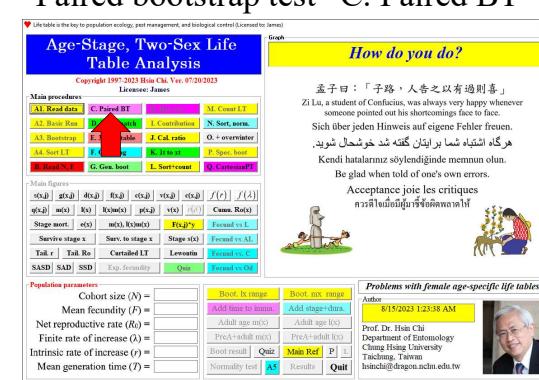

"Project: Diamondback moth at 25C"  
 "User: Ta-Chi Yang"  
 "DBM"  
 50

"Project: Silverleaf whitefly at 25C"  
 "User: Hsin Chi"  
 "25C"  
 50

**Paired bootstrap test**

	B	C	A
B	---	<b>644.53</b>	<b>676.82</b>
C	<b>63.51*</b>	---	<b>32.28</b>
A	<b>112.33*</b>	-417.14	---

The mean difference between B and C is 644.53, the lower confidence interval of differences is 63.51. Because CI does not include 0, there is significant difference at the 5% level. The mean difference between C and A is 32.28, the confidence interval is -417.1~481.7. Because CI includes 0, there is no significant difference at the 5% level.

### In case you cannot find the file you need for the paired bootstrap test

- You may need some special bootstrap data file for paired test. For example, if you want to the eggs laid by female per oviposition day, you can use the following file to run "G. Gen. boot" (Genarel bootstrap)  
**Ex\_G\_Eggs per Od\_for general boot.txt**
- You will get the following file for paired bootstrap test  
**Ex\_G\_Eggs per Od\_for general boot\_0\_GB\_0\_results for PT 1 by 1.txt**

Copyright 1997-2024 Hsin Chi
